Lufkin® Measuring

Ever since the first Lufkin® wood rule was produced in 1869, the Lufkin brand has been synonymous with high quality and unmatched accuracy. Today, Lufkin wood rules, power tapes, engineering and surveying tapes, specialty tapes and measuring wheels comprise one of the widest selections of measuring products available from any manufacturer.

For over a century, Lufkin® tapes have been recognized as the standard for accuracy and high quality. Lufkin® steel tapes are manufactured to government standards traceable to the U.S. Department of Commerce, National Institute of Standards and Technology. Periodically, these standards are recalibrated with renewed certification by the N.I.S.T.

OIL GAUGING TAPES

Solid one piece design increases strength and durability

New ergonomic handle allows for a stronger, more comfortable grip and better balance

Line Wiper Ready: Front portion of new handle has an adjusted diameter and longer attachment bolt to fit perfectly with popular tape wipers

New turn knob provides more surface area for a more secure grip and helps lessen hand fatigue

How to Change Short Tape Blades

1. Pull old blade out past end until about 2" of bluish metal spring is exposed. Put a nail in round hole (A) in spring to hold it.
2. Note how old blade is attached, then remove it.
3. New blade is reverse wound, ready to attach to spring. With blade graduations up, turn spring sideways and insert from bottom into slot (B) in new blade. Twist spring and pull back until notches (C) lock at rear of slot (B).
4. Remove nail and return blade to case.

Oil Gauging Tapes & Plumb Bobs Information

Plumb bobs are not supplied with tapes. The last part of the catalog number denotes the style of the bob the tape is made to accept. Lufkin oil gauging tapes and plumb bobs are manufactured to meet the applicable specifications outlined in the National Institute of Standards and Technology Handbook 44, 2011 Edition, Section 5.52. Manufacturing tolerances for final measurement comply with API MPMS Second Edition, August 2005, Chapter 3, Section 1A, Appendix 1.2.

1. Never gauge a tank during an electrical storm.
2. Ground yourself and your tools by touching the tank ladder before climbing the ladder. Do not wear gloves when grounding yourself. Gloves prevent proper grounding.
3. Ground yourself before opening the gauging hatch by touching the handrail or platform (without gloves on). During and after removal of the gauging cover, stand so that the gas will not be inhaled. Wear a gas mask if toxic gases are present.
4. Always maintain contact between the gauging tape and the edge of the hatch from the moment the gauge bob enters the hatch until the gauge bob is removed from the hatch.

OIL GAUGING TAPES

- Chrome Clad® for dark (heavy oils)
- Nubian® for light (clear oils)
- “Double Duty” oil gauging tapes with both Chrome Clad® and Nubian® (black) for dark (heavy) and light (clear) oils
- Made of heavy gauge 1/2" (13mm) x .012" (0.3mm) steel
- Snap-swivel hook on front end of tape for a plumb bob
- Two arm frames for shorter lengths; four arm frames for 30m/100' and greater
- Large drums and winding handles for quick and easy rewinding
- Handle folds over for storage and to lock line at extended position

It takes more than a quality gauging tape, it takes a smart user. Every time you use a Lufkin oil gauging tape, follow proper grounding techniques. Ground your body. Ground your gear. And always use a grounding strap. Lufkin oil gauging tapes come complete with a grounding strap and an ESD handle, and are in full compliance with all current and proposed American Petroleum Institute standards. Achieve a solid ground every time. Use Lufkin oil gauging tapes, and follow proper grounding procedures.

HOW TO MEASURE AN INAGE PLUMB BOB

Tapes cut and fitted with the swivel snap to be used with the 588 and 590 plumb-bobs are known as inage gauging tapes. When the plumb bobs are assembled to the swivel snap the zero point is at the bottom of the plumb bob. When being used, the plumb bob and tape are lowered until the bob contacts the bottom of the tank. When the tape is reeled in, the liquid line is read on the tape line itself, thereby showing you the contents of the tank.

HOW TO MEASURE AN OUTAGE PLUMB BOB

Tapes which have the swivel snap fitted so as to accommodate the 587 1/2 plumb bob are known as outage tapes. When the 587 1/2 plumb bob is assembled to the tape line the zero point is at the intersection of the swivel snap and the plumb bob. When using outage gauging tapes the tape is lowered into the tank until the plumb bob just penetrates the liquid. The tape is then rewound and the liquid level is read right off the plumb bob. The reading on the plumb bob is added to the tape reading giving the total outage (how much liquid has been removed from the tank).

Steel Tape Line Accuracy

Lufkin® steel tapes are made to government standards. Our bench standards for the United States are certified accurate by the United States Department of Commerce, N.I.S.T. Tapes for Canada are made to Canadian government standards.

Temperature standard for steel tapes is 68°F, which equals 20°C. Coefficient of expansion of steel tapes is 0.0000645' per degree F; 0.0000116' per degree C. This amounts to 0.000645' or 0.00774" per degree F. on a 100' tape, and one-half as much on a 50' tape. As a figure that is reasonably accurate and also easy to handle, it is customary on very long runs of pipe to allow 1/10" per 100' for each 10° change.

The above illustration shows, for a 100' tape, the actual length variations of temperature within the range of 20° below to 120° above zero °F. The terminal graduation on the lower edge is at 68°, this being standard temperature. Standard tension for steel tapes 25 to 100' long (10 to 30m) supported entire length on a horizontal, flat surface, is 10 pounds (4.5 kg.); for all tapes over 100', 20lbs., (9kg.). For steel tapes suspended horizontally and supported only at ends, there can be no set or standard tension for accuracy because of weight and other variations.

The following listings are averages of many tests made by the N.I.S.T. of Lufkin® steel tapes supported throughout and supported ends only. These averages are taken from the experience of tests and should be used as a working basis only, and not to replace the test of any individual tape. All tape lengths are 100'.

Tape Width (in)	Kind of Tape	Tension of Accuracy Thru-out (lbs)	Supported Ends Only (lbs)
1/4	Chain Tapes	10	24
1/4	Engineer's (0.12")	10	18
1/4	Engineer's Extra Heavy Tapes	10	24
3/8 & 1/2	Standard Weight Tapes	10	18

NOTE: Temperature and tension need to be taken into account only on precise work. We recommend a government test of tapes to be used for such work or for use as master standard. The N.I.S.T. and Lufkin® have a charge for this test.
